

# COUNTRY TO COAST CABLING

ABN: 60427037543

## Home Theatre – Networking – Television – Data – Telephone – Fibre Optics

With the coming of the Digital Age and the new Smart Home Communities the opportunity presented itself to embark into business to serve the Central Queensland Region.

Established in Rockhampton in 2008, Country to Coast Cabling proprietor Wain Rath has been involved in the Data & Communications Industry for over 8 years.

As Sales Rep and Key Accounts Manager for Haymans Electrical, his area covered Region 1, an area from Cairns in the North to Gympie in the South and West to Mount Isa.

Prior to that position he was Branch Manager of Haymans Electrical in Musgrave Street, Nth Rockhampton.

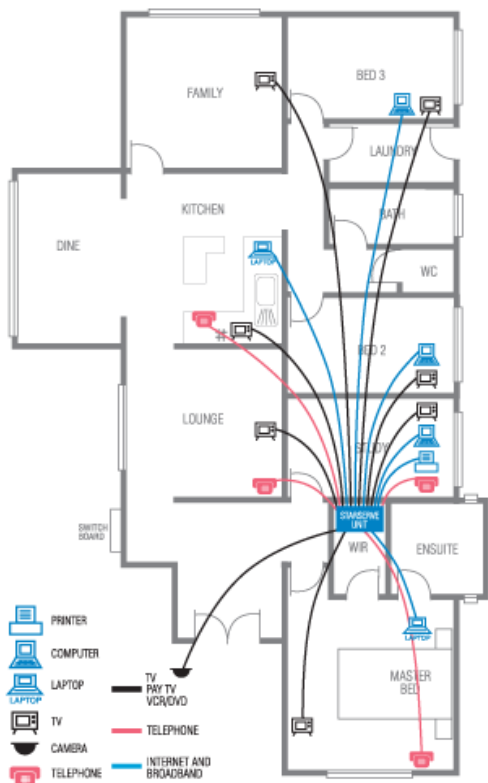

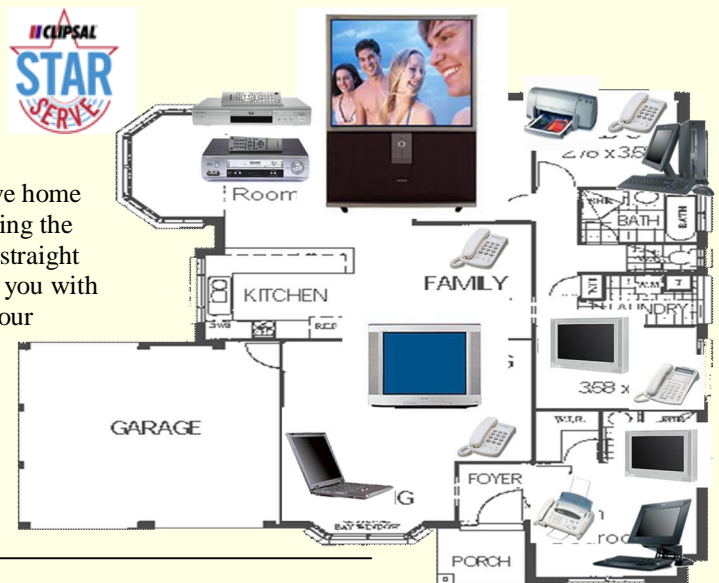

A Registered TITAB Installer Wain holds certificates with endorsements for Structured Cabling, Fibre Optics & Coax. Other courses completed are PDL Lexcom, Clipsal Star Serve, MatchMaster Antenna, MATV, SMATV.

## When planning an installation Remember to plan for the future!

Say goodbye to messy cords draped across the floors. StarServe home networking also keeps your home neat and tidy; pre-wired during the building process so your TV, data and phone outlets are fitted straight into the wall, just like a power point. Altogether, this provides you with a great networking solution that will add significant value to your house.

Incorporating a StarServe home networking system into your building plans makes it possible to distribute TV, phone and data to any room of your home, removing any unnecessary cables and providing you with the ultimate in convenience.

**PDL LexCom Home® Network** a unique system that gives you access to all your entertainment, communication and data services from any room in your home.

Structured Cabling in homes in Smart Home Communities is done during the building stage, this allows outlets to be placed in various rooms around the home, giving better internet and TV access after being built as outlets are already in place.

However, older homes can also be retro fitted but at a higher rate due to roof and wall access no longer being available without complications. Examples such as Struts, deteriorating fiberglass batts in both roof and walls, double walls covering asbestos, and small roof cavities requiring a plumber to remove sheeting are just a few of the items that can be involved. Often ducting on an interior wall is then required.
